## *Fruit flies - the nightmare for fruit farmers*

Fruit flies can be a problem year round, but to fruit and fruiting vegetable farmers, this pest is a nuisance; a nuisance that is very difficult to control by the use of chemical pesticides.

Continuous research in alternative control options have led to the introduction of pheromone-based and protein-based baits. Farmtrack Consulting is at the forefront in commercializing such products.

### **TorulaTrack®**

This is a food attractant that lures many species of fruit flies affecting fruits and vegetables, especially the female adults which are at the oviposition stage. As female flies visit to feed on the attractant bait, they drown and die.

### **Ingredients of TorulaTrack®**

- Torula yeast
- Plant protein
- Sugars
- Inert materials

### **Advantages of using TorulaTrack**

- The dissolved tablets do not degrade with time as it's enriched with a preservative.
- Dead insects do not decompose to leave a filthy smell in your trap
- It is environmentally friendly,
- It is safe to humans and animals
- Doesn't contain pesticides,
- Do not contaminate the fruits
- Doesn't leave residues on fruits
- Attracts females before the lay eggs therefore kills them before damaging fruits
- TorulaTrack contains a protein required by females before laying eggs on fruits

### **Application Instructions**

1. Dissolve 3 tablets of TorulaTrack in 1 liter of clean water.
2. Dispense the mixture in several Lynnfield traps. Place the trap under a tree branch using a fastener and there you go. Female flies' starts streaming in to feed on the bait.
3. Sieve away dead flies when they fill the top layer to allow for more to be trapped.
4. When the bait mixture dries off, replenish by dissolving another TorulaTrack tablet.

### **Application rate**

At least 6 traps/acre (1 liter of TorulaTrack solution will cover an area of up to 1 acre). For mass trapping, increase the number of traps.
