## How to Safely Store Grains in the Storage Bag

1. Ensure the cereals to be dried a r e c o m - p l e t e l y

dry and remove any debris. Proper drying helps prevent aflatoxins and also reduce the initial rate of pest infestation.

2. Take the cereals bags apart and check for any holes and tears. Do not use a bag that h a s holes.

3. Pour a small amount of grains in the inner bag, starting gently. This will help to insert the first bag into the second.

4. Insert the first polythene bag into the second polythene bag. Make sure there are no air pockets at the bottom.

5. Insert the two polythene bags in the woven Polypropylene bag, as shown in the picture (right).

6. Fold the top of the woven polypropylene bag. Do the same for the second polythene bag.

7. Fill the inner polythene bags with grains. Shake gently from time to time to reduce pockets of air. Make sure no grains get in between the bags.

Filling the Bag

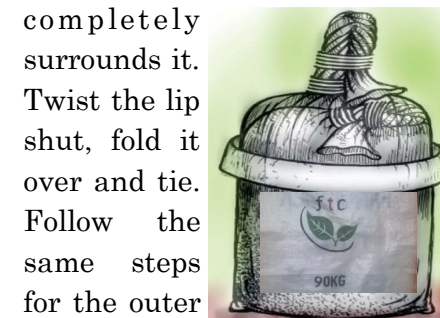

8. Fill the bag far enough so that a lip remains for tying. Pack the grains tightly to remove air.

9. Tie the lip of the first bag tightly shut. Fold it over and tie with a string at the base of the twist and over the folded twist.

10. Pull the middle bag over the first one completely so that it completely surrounds it.

Twist the lip shut, fold it over and tie. Follow the same steps for the outer bag.

### Tying steps

Step 1 Inner bag first Step 2 Middle bag next Step 3 Outer bag last
